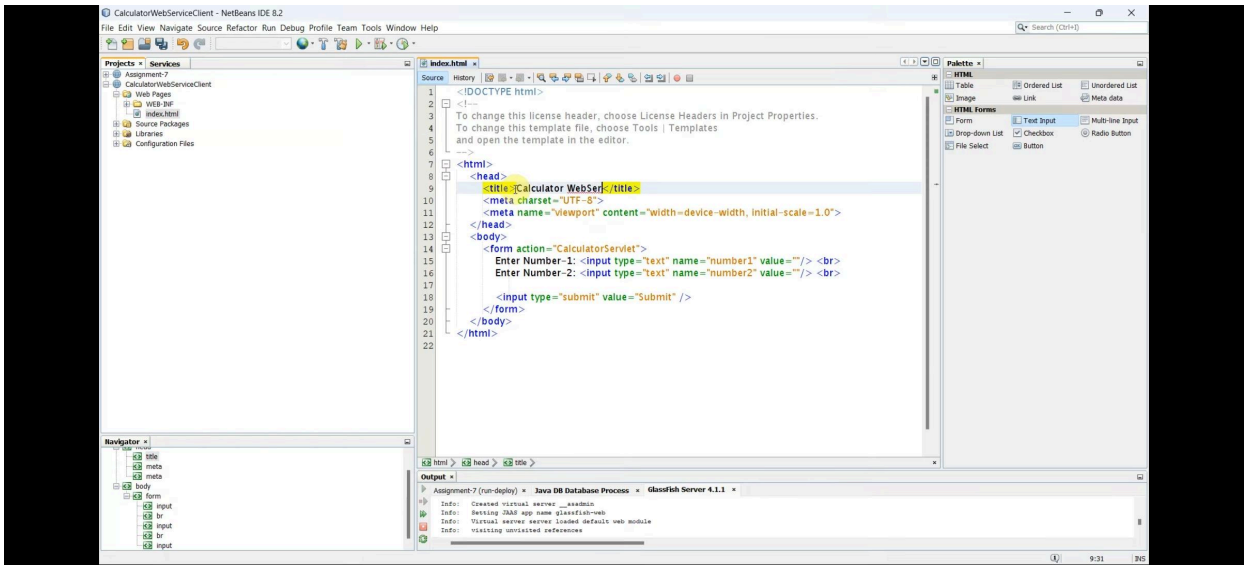
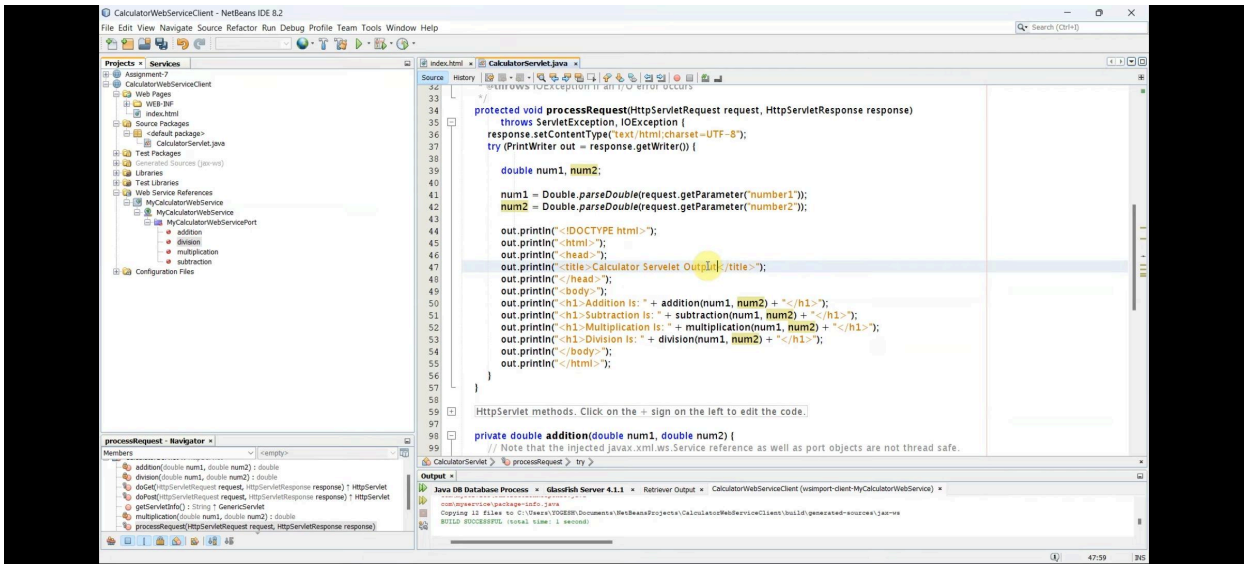
For new project in netbean
First goto file
Then new project
Goto java web -> web application
Next next then check weather you choose glassfish server also java ee7
Now click right click on assignment 7 and new
->webservice and now name that file as calc web service also package like any com.package and only first box check

Now cut some part like function (last one)
Webmethod
And now rightclick on mycalcwebservice and add operations and here name addition and r type double
Then in parameter add
num1 double
Num2 double
Tere is also design side of source you can add operations by that also
And in function where 00 is returned there we have to do num1 + num2 or multply
And then right click on assignment 7 and build
And if green succes
Rightclick on assignment 7 deploy
You can see that on glassfish
Now on calcwebservice right click test web service
Now we have to show that on client pg
So create new project -> java -> web application
Name file calc web service client
And same as previous file settings
Then on html pg add side pallet windows ide pallet
Drag form and name that in action calc soverlet



Do similar enter no. 1 and it's input
After submit button
Right click on calc web service folder-> new =>web service client
Then project browse to assignment my calc web service
Then copy servelet name of form and right click on web service client folder servelet
And paste there name and next next and ticket the check box
Now new tab have been open
Here drag and drop the files sub add mul which are there in reference folder
And to similar changers



Now for client folder right click and clear and build
Now on client folder
Web pages
Web inf
Index.html do right click on full display and run
